EDUCATION

B.E. in Computer Science and Engineering, 8.8 CGPA Chaitanya Bharathi Institute of Technology, Hyderabad	2018 - 2022
Master of Business Administration (MBA) in Finance, 8.7 CGPA University College of Commerce and Business Management, Hyderabad	2024 - 2026

SKILLS

Core Skills: Accounting, Economics, Financial Modeling, Financial Reporting & Analysis, Derivatives, Statistics

Data Analysis & Visualization: Advanced Excel, Power BI, DAX

Programming: C, C++, Java, Python

Tech Skills: SQL, Computer Networks, Data Structures and Algorithms, Linux, AWS, Git, Machine Learning

PROFESSIONAL EXPERIENCE

D. E. Shaw India Private Limited Member Technical Full Time	May 2022 - Jan 2024
- Worked with the Futures and Options trading team to analyze derivatives market data, bonds and track implied volatility, open interest, and option greeks. - Built automated pipelines to capture and analyze F&O market data, improving latency & accuracy in trading decision tools. - Developed daily reports on market data, volatility surfaces and evaluated strategies such as straddles, strangles, and spreads for risk-return tradeoffs.	

Arcesium India Private Limited Site Reliability Engineer Internship	Jan 2022 - May 2022
- Debugged and optimized database issues, ensuring high availability of EC2 and RDS services. - Managed MS SQL and PostgreSQL database operations & improving query optimization. - Researched on Flyway (open-source DB migration tool) for automated schema/version control.	

PROJECTS

Nifty 50 Stock Market Analysis | Power BI – [View Project](#)

- Designed a Power BI dashboard for Nifty 50 analysis, which visualize fundamental analysis (Ratio Analysis, Cash Flow Analysis, Trend Analysis) and technical analysis (Moving Averages, RSI, MACD, Volume Analysis).
- Utilized Python for data extraction, cleaning and applied DAX measures for ratio analysis.

Implied Volatility Surface Modeling (Python) – [View Project](#)

- Built Python script to compute, visualize and forecast implied volatility surfaces for options data.
- Retrieved live option chain data via yfinance, calculated implied volatilities using Black-Scholes & SciPy optimizers, and visualized 3D volatility smiles/skews with Matplotlib.

Study on Credit, Market, and Operational Risk in Indian Banks – [View Project](#)

- Credit Risk → Logistic regression for default prediction, NPA analysis.
- Market Risk → Value at Risk (VaR), GARCH models for volatility forecasting.
- Operational Risk → Poisson & Lognormal models for loss frequency/severity.

ACHIEVEMENTS

- Scored 95.6 percentile in UGC NET 2025 (management) & top 5% in GATE CSE 2021.
- Ranked 212 in CodeChef long challenge coding contest (24,000+ participants).
- Certified by HackerRank in problem solving and Java programming.
