Crude Oil (WTI) — Monthly candles with 20/50-MA, support/resistance & Fibonacci

Method: The Buy/Sell/Hold view is a **confidence-weighted score** across five categories — Trend (40%), Momentum (25%), Volatility (15%), Mean-Reversion (10%) and Structure (10%) — each voting in [-1,+1]; the weighted net gives the direction and the % confidence. Stops/targets are sized to volatility (1.5x / 2.5x ATR); extremely overbought/oversold tapes are stepped aside to HOLD. The per-asset **Summary** is **auto-generated from the indicators by a rule-based template** (not AI).
