PROFESSIONAL SUMMARY

Finance and accounting analyst with an MBA in Finance and a B.E. in Computer Science, NISM Series XV certified, and close to two years of capital markets experience on the Futures and Options desk at D. E. Shaw. Skilled in three statement modeling, budgeting and forecasting, valuation, and variance analysis, along with cost accounting, taxation, advanced accounting, and financial management. Comfortable analysing financial statements and building models in Excel and Python.

SKILLS

Financial Modeling & FP&A: Three statement modeling, driver based forecasting, budgeting and forecasting, variance analysis (budget vs actual), scenario and sensitivity analysis

Valuation & Financial Analysis: DCF (FCFF, WACC, terminal value), comparable companies (EV/EBITDA, P/E), financial statement analysis, ratio analysis, DuPont, cash flow analysis

Accounting & CA: Cost accounting, taxation, advanced accounting, financial management, management accounting

Corporate Finance: Cost of capital, working capital, capital budgeting (NPV, IRR), GAAP and IFRS basics

Tools & Data: Advanced Excel, Tally, Power BI, SQL, Python (pandas, NumPy)

EXPERIENCE

D. E. Shaw India Pvt. Ltd. | Member Technical (F&O Trading Desk)

May 2022 to Jan 2024

- Analysed daily company and market data across the F&O universe and turned it into clear, decision ready conclusions and reports for the desk.
- Built analytics tools and dashboards the desk used to monitor volatility, exposure, and positioning across instruments.
- Built automated Python pipelines to capture, clean, validate, and reconcile daily market data, cutting manual work and improving accuracy.
- Evaluated option strategies such as straddles, strangles, and spreads on a risk and return basis under different market conditions.
- Prepared daily and weekly reports on market data and volatility, working to tight daily deadlines with high ownership.

PROJECTS

Integrated Three Statement Model: Driver Based 5 Year Forecast with Scenarios (MSFT) | Python, Excel

- Built a linked income statement, balance sheet, and cash flow with a driver based forecast that stays balanced each period from a small set of driver inputs.
- Ran base and downside scenarios and a simple valuation off the forecast cash flows, and wrote it as a tested Python model with a clean Excel output for review.

Equity Intrinsic Valuation Engine: 5 Year DCF, WACC & Terminal Value Sensitivity (AAPL) | Python, Excel

- Built a five year FCFF DCF with WACC, terminal value, an equity bridge, and base and downside scenarios to arrive at an intrinsic value per share.
- Added a reverse DCF to show the growth and margins the current price implies, plus a two way sensitivity on WACC and terminal growth, reconciled to Excel.

Corporate Credit Assessment Engine: Financial Spreading, DSCR/ICR & Internal Rating Scorecard | Python, Excel

- Spread a borrower's financials and computed leverage, coverage, liquidity, DSCR and ICR, then mapped them to an internal rating with a transparent scorecard.
- Stress tested EBITDA and interest rates to check serviceability headroom under a downside case, and rated sample borrowers from strong to distressed with an Excel report.
